CONTROL** INC.

The right chemistry...

...the right solution

Product Bulletin

Product H

Description

Product H is a proprietary blend of specialty surfactants blended in the proper proportions so that the Hydrophilic / Lipophilic Balance (HLB) is appropriate for the emulsification of naphthenic oil. When used under the direction of specific testing procedures developed by Coolant Control, Inc., **Product H** will aid in the long term stability of soluble oils and semi-synthetic fluids that have begun to separate in the sump due to a change in the HLB of the fluid.

Typical Properties

Appearance	Clear to hazy liquid, pleasant odor
pH, neat	approx. 7.0
pH, in use	Assumes pH of the fluid being used
Specific Gravity	0.940

Recommended Applications

Added sump side, typically .25 to 0.5 liters of **Product H** per 1000 liters of fluid is all that is necessary to correct the HLB of the coolant system and improve fluid stability.

Availability

Product H is available in 5 and 55-gallon non-returnable containers as well as 330-gallon returnable totes.
